

Preambulatory & Operative Clauses

Preambulatory Clauses

The preambulatory clauses state all the issues that the committee wants to resolve on this issue. It may state reasons why the committee is working on this issue and highlight previous international actions on the issue. Pre-ambulatory clauses can include:

- Past UN resolutions, treaties, or conventions related to the topic
- Past regional, non-governmental, or national efforts in resolving this topic
- References to the UN Charter or other international frameworks and laws
- Statements made by the Secretary-General or a relevant UN body or agency
- General background information or facts about the topic, its significance, and its impact.

It's very simple to write preambulatory clauses. First, take a statement that you want to write about (perhaps an issue you want to solve or a specific fact from one of the five bullet points above). You then take that statement, combine it with an italicised preambulatory phrase (following pages), and end it with a comma.

Operative Clauses

Operative clauses state the solutions that the sponsors of the resolution proposes to resolve the issues. The operative clauses should address the issues specifically mentioned in the pre-ambulatory clauses above it.

To write an operative clause take a solution that you want to include in the draft resolution. Then take that solution, combine it with an italicised operative phrase (following pages), and end it with a semicolon (the last operative clause ends with a period). Operative clauses are also numbered. This differentiates them from preambulatory clauses, helps show logical progression in the resolution, and makes the operative clauses easy to refer to in speeches and comments.¹
